Reference: "What do those numbers mean anyway?" – The foundations of learning GPS made easy.

Dear Bill:

It was with great interest that I reviewed your training manual, "What do those numbers mean anyway? – The foundations of learning GPS made easy", and the included DVD. I am very impressed by the quality and content of these highly professional training aids.

I have many years of experience in the forest industry, have been involved as a leader and instructor in Scouting and Cadets, and have a love for camping and boating with my family. The ability to field navigate with map, compass, and now Global Positioning Systems is of vital importance in all of these areas. Your manual and DVD provides a well thought out, structured, and easy to understand package that would be of significant benefit for anyone interested in field navigation.

I highly recommend this product and the training it offers to those working with or interested in exploring these tools – well done!

Best regard,

Kenneth W. Durst
